

CHINTHA VAMSIDHAR REDDY

Software Engineer · Full Stack Developer · Backend Developer

+91 8317655125 | vamsidharreddy831@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#) | [LeetCode](#)

PROFESSIONAL SUMMARY

Software Engineer and Full Stack Developer with production deployment experience at Infosys Springboard and a peer-reviewed research publication on IEEE Xplore (2026). Proficient in designing and shipping scalable REST APIs, microservices, and full-stack web applications using Java, Spring Boot, React.js, and Node.js. Demonstrated ability to lead cross-functional engineering teams, architect multi-role platforms, and integrate AI/ML capabilities as supporting depth. Seeking Software Engineer, Full Stack Developer, or Java Backend Developer roles where engineering impact starts on day one.

EDUCATION

B.Tech — Computer Science & Engineering

Sep 2022 – May 2026

Kalasalingam Academy of Research and Education (KARE)

CGPA: 8.3 / 10

Relevant Coursework: Data Structures & Algorithms, OOP, Database Management Systems, Computer Networks, Operating Systems, Machine Learning, Software Engineering

Intermediate — MPC

Jun 2020 – Mar 2022

Narayana Junior college

Percentage: 82.2%

10th — General

Jun 2019 – Mar 2020

Yasoda Concept School

Percentage: 74%

Internship

Java Full Stack Developer · Project Lead · Infosys Springboard

Sep 2025 – Nov 2025

Remote, India · Java · Spring Boot · React.js · MySQL · JWT · WebSocket · JUnit · Docker · Agile/Scrum

- ▶ Led a team of 5 engineers across a 12-week Agile development cycle, managing sprint planning, task allocation, code reviews, and milestone delivery for a production-grade full-stack application.
- ▶ Engineered and deployed 20+ secure RESTful API endpoints using Java, Spring Boot, Spring Security, and Hibernate/JPA, implementing JWT-based authentication and role-based access control (RBAC) for protected data workflows.
- ▶ Built and integrated React.js frontend components with Spring Boot backend services via REST APIs and WebSocket (STOMP), reducing UI-backend integration failures by 40% through structured API contracts.
- ▶ Executed 50+ unit and integration test cases using JUnit and Postman; identified and resolved 25+ defects, achieving 98% stable deployment rate across all sprint deliverables.
- ▶ Containerized the application using Docker to standardize the development environment and simplify deployment pipeline consistency across the team.
- ▶ Contributed to High-Level Design (HLD), Low-Level Design (LLD), database schema modeling, and API documentation, and presented the solution via live deployment demo to Infosys mentors and evaluation panel.

Frontend Developer Intern · OctaNet Services Pvt. Ltd.

Jun 2024 – Jul 2024

Remote · HTML · CSS · JavaScript · REST API Integration

- ▶ Developed and deployed 3+ responsive web pages compatible across Chrome, Firefox, Edge, and Safari; implemented asynchronous data fetching using Fetch API to improve perceived page load performance.

PROJECTS

NeuralLog — LLM Inference Logging & Analytics Platform

[GitHub](#) ↗

Java · Spring Boot 3.2 · React.js 18 · MySQL · Docker · Kubernetes · Server-Sent Events · OpenAI · Gemini · Groq · Maven

- ▶ Architected a production-grade full-stack observability platform integrating three LLM providers (OpenAI GPT-4.1, Google Gemini, Groq) through a provider abstraction layer enabling seamless multi-model conversations and provider switching.
- ▶ Engineered real-time token streaming using Server-Sent Events (SSE) for low-latency response generation; implemented persistent multi-turn conversations with context retention across the last 20 messages.

- ▶ Built an asynchronous inference logging pipeline using Spring @Async processing to capture latency, token usage, and error metadata — with automated PII redaction (emails, phone numbers, card data) — without impacting chat throughput.
- ▶ Designed and exposed 20+ RESTful APIs for chat management, analytics, conversation lifecycle, and provider integrations; containerized with Docker and deployed Kubernetes manifests with HPA, Ingress, and Persistent Volume support.

FlightNest — Multi-Role Flight Booking Platform
[GitHub ↗](#)

Spring Boot · Angular · Spring Security · JWT · Hibernate/JPA · MySQL · REST APIs · TypeScript

- ▶ Engineered a full-stack flight booking platform with RBAC across 3 user roles (Customer, Pilot, Admin); designed 20+ RESTful API endpoints with JWT-based Spring Security authentication and role-enforced data access.
- ▶ Architected normalized MySQL schema supporting concurrent booking, cancellation, and schedule management; optimized multi-join queries across booking lifecycle workflows to reduce average read latency.

ServiceConnect — Full-Stack Service Marketplace
[GitHub ↗](#)

Node.js · Express.js · React.js · Next.js · TypeScript · MySQL · JWT · Payment Gateway · REST APIs

- ▶ Designed and developed a full-stack service marketplace platform connecting customers with verified service professionals; built and integrated 20+ REST API endpoints for user management, vendor onboarding, booking management, reviews, and payment processing.
- ▶ Implemented JWT-based authentication with RBAC across 3 user types (Customer, Vendor, Admin); integrated online payment gateway with automated booking confirmation and relational MySQL schema ensuring data consistency at scale.

Authentication Platform — JWT + OAuth 2.0 System
[GitHub ↗](#)

Spring Boot · Spring Security · React.js · JWT · OAuth 2.0 · Google OAuth · GitHub OAuth · MySQL · BCrypt · SMTP

- ▶ Built a production-ready authentication system with access/refresh token rotation, BCrypt password hashing, email verification, password recovery, and OAuth 2.0 integration (Google + GitHub) using Spring Security best practices.

TECHNICAL SKILLS

Backend	Java, Spring Boot, Spring Security, Hibernate/JPA, Node.js, Express.js, REST API Design, JWT, WebSockets, Maven, Servlets
Frontend	React.js, Angular, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS
Databases	MySQL, PostgreSQL, MongoDB
DevOps	Docker, Kubernetes, Git, GitHub, CI/CD fundamentals
AI/ML	Python, TensorFlow Lite, CNN, LLM API Integration (OpenAI, Gemini, Groq), RAG concepts, Prompt Engineering
Mobile	Flutter (Android, iOS, Web, Desktop)
Practices	OOP, MVC, Microservices, System Design, Agile/Scrum, SDLC, RBAC, Unit Testing, Code Review
DSA	100+ LeetCode problems solved · HackerRank (4 Badges) · Strong foundations in arrays, trees, graphs, DP

PUBLICATION

HerbAI: A Deep Learning-Based Model for Real-Time Identification and Documentation of Medicinal Plants

IEEE Xplore · 2025 · ieeexplore.ieee.org/abstract/document/11390093

Proposed a hybrid CNN–Vision Transformer architecture for efficient on-device medicinal plant classification; achieved 92% validation accuracy across 40 plant species with offline-first deployment across Android, iOS, Web, and Desktop via Flutter.

CERTIFICATIONS

Java Programming — Udemy	Data Structures & Algorithms — Infosys Springboard
Python Programming — Udemy	NoSQL Databases — Infosys Springboard
